ICON(d)   **ICON(d)**

NAME

icon − do consistency check of i-nodes

SYNOPSIS

icon filesystem

DESCRIPTION

Icon does a consistency check on all of the i-nodes on the specified filesystem. The file system argument must be a special file name referring to a device containing a file system. Read permission is required on the specified file system device.

Icon makes a list of all i-nodes for which the number of blocks allocated does not correspond to the size field in the i-node. For all files with the exception of contiguous files, these values should correspond.
