UMOUNT(VIII)   UMOUNT(VIII)

NAME

umount − dismount file system

SYNOPSIS

/etc/umount special

DESCRIPTION

Umount announces to the system that the removable file system previously mounted on special file *special* is to be removed. Only the super-user may unmount file systems.

SEE ALSO

mount (VIII), umount (II), mtab (V)

FILES

/etc/mtab   mounted device table

DIAGNOSTICS

Frequently, in the case of */usr*, the file system is found to be busy because one of the Shell accounting files (*/usr/adm/sh_acct* or */usr/adm/su_acct*) is open for some Shell or system accounting is active (*/usr/adm/acct*).
